of the Nervous System. Central Nervous System (CNS) Brain Spinal Cord Peripheral Nervous System (PNS) nerves, ganglia, receptors. The central nervous system develops from the neural tube, while the peripheral nervous system develops from the neural crest cells. This indicates an embryo, looking at it from a dorsal viewpoint.

The brain and the spinal cord are the central nervous system, and they represent the main organs of the nervous system. The spinal cord is a single structure, whereas the adult brain is described in terms of four major regions: the cerebrum, the diencephalon, the brain stem, and the cerebellum.
