Anchoring or focalism is a cognitive bias for an individual to rely too heavily on an initial piece of information offered (known as the "anchor") when making decisions.. The original description of the anchoring effect came from psychophysics where it was noticed when judging stimuli along a continuum that the first and last stimuli were used to compare the other stimuli.

An anchor is a device, normally made of metal, used to connect a vessel to the bed of a body of water to prevent the craft from drifting due to wind or current. The word derives from Latin ancora, which itself comes from the Greek ἄγκυρα (ankura).. Anchors can either be temporary or permanent. Permanent anchors are used in the creation of a mooring, and are rarely moved; a specialist ...
